

To Whom It May Concern:

The undersigned swears and affirms that he is a recipient of medicinal cannabis/marijuana supplied by the government of the United States. The marijuana is grown under United States government supervision at a farm operated for the sole purpose of growing marijuana by the University of Mississippi. The marijuana is packaged and distributed to me and seven other patients for various medical afflictions. My disease is multiple congenital cartilaginous exostosis and a variant of the syndrome pseudo pseudo hyperparathyroidism.

* The prescription amount that I receive for my disease is issued to me every three weeks. The amount needed to positively effect my disease is far beyond that used by a recreational user of cannabis. My particular prescription requires a three week dosage of eleven cured ounces of marijuana. This dosage is administered through inhalation at various times throughout my professional and private life. I experience no negative or work orientated problems as a result of this dosage, in fact without this medication I could not function as a professional. I am a successful stockbroker, husband, and businessman.

If required, I am prepared to cooperate in all ways to educate and inform any authority of the need for this medication in some medical circumstances and to confirm that the quantities of this medication required to be effective may seem exaggerated to the uninformed and non medically trained observer.

Sincerely,

Irvin H. Rosenfeld

The marijuana is grown under United States government supervision at a farm operated for the sole purpose of growing marijuana by the University of Mississippi. The marijuana is packaged and distributed to me and seven other patients for various medical afflictions. My illness is glaucoma.

The prescription amount that I receive for my disease is issued to me every month. The amount needed to positively effect my symptoms is far beyond that used by a recreational user of cannabis. My particular prescription requires a one month dosage of eight cured ounces of marijuana. This dosage is administered through inhalation at various times throughout my professional and private life. I experience no negative or work oriented problems as a result of this dosage. In fact without this medication I could not function to my present capacity.

If required, I am prepared to cooperate in all ways to educate and inform any authority of the need for this medication in some medical circumstances and to confirm that the quantities of this medication required to be effective may seem exaggerated to the uninformed and non medically trained observer.

Sincerely,

Ely Minkler
