While men are more likely to be targeted by drug law enforcement, many of the drug war’s victims are women. Largely as a result of draconian drug laws, women are one of the fastest growing segments of the U.S. prison population. Most women behind bars are mothers, many of them sole caregivers. Women, and particularly women of color, are disproportionately affected by drug law enforcement, by social stigma, by laws that punish those unable or unwilling to inform on others, by regulations that bar people with a drug conviction from obtaining public assistance, and by a drug treatment system designed for men.

Drug use and drug selling occur at similar rates across racial and ethnic groups, yet black and Latina women are far more likely to be criminalized for drug law violations than white women. Black women are more than twice as likely—and Latinas are 25 percent more likely—to be incarcerated than white women. Women are one of the fastest-growing segments of the prison population. Between 1978 and 2014, the number of women in state and federal prisons grew by nearly 800 percent. The U.S. accounts for 5 percent of the world’s female population but it represents almost 30 percent of the world’s incarcerated women. Globally, the 25 jurisdictions that have the highest rates of women incarcerated are all U.S. states.

Nearly a quarter of women in state prison were incarcerated for drug offenses at the end of 2013, compared to 15 percent of men. As of September 30, 2014, roughly 59 percent of women in federal prison were incarcerated for drug offenses, compared to approximately 50 percent of men.

Even though black women are no more likely than white women to use illicit drugs during pregnancy, they are far more likely to be reported to child welfare services for drug use. In fact, a seminal study published in the New England Journal of Medicine found that black women were 10 times more likely than white women to be reported to child welfare. More than half (54 percent) of incarcerated people are parents of minor children, including more than 120,000 mothers and 1.1 million fathers. Roughly 60 percent of women in state and federal prisons are mothers of minor children. Two-thirds of these parents are incarcerated for non-violent offenses, a substantial proportion of which are drug law violations.
As many as 2.7 million children (one in every 28) are growing up in U.S. households in which one or more parents are incarcerated. The racial disparities seen in the incarcerated population replicate themselves among the children left behind: by 2008, one in nine (11.4 percent of) black children, one in 28 (3.5 percent of) Latino children and one in 57 (1.8 percent of) white children had an incarcerated parent.

The long-lasting penalties and exclusions that follow a drug conviction have created a permanent second-class status for millions of Americans, who are often banned from voting, getting a job, securing a student loan, and accessing housing or other forms of public assistance, such as Temporary Assistance for Needy Families (TANF) and Supplemental Nutrition Assistance Program (SNAP). A 2013 report found that more than 180,000 women have been affected in the twelve states that maintain a full lifetime ban for people with drug convictions. Due to the extreme racial disparities in drug law enforcement and sentencing, these collateral consequences disproportionately affect people of color.

An estimated 84 percent of parents in federal prison and 62 percent of parents in state prison are housed 100 miles or more from their children. Pregnant women who are incarcerated for drug law violations often do not receive prenatal care. Children are routinely separated from their imprisoned mothers, causing irreparable damage to the child.

Prisons and jails commonly use restraints (handcuffs and shackles) on women in labor and during delivery, regardless of their histories. According to a 2015 shadow report to the United Nations Committee on Torture, “Only 18 states have legislation in place that restricts the use of restraints on pregnant inmates, 24 states limit the use of restraints on pregnant inmates only through institutional policies, and 8 states do not have any form of regulation at all.” Washington DC and the Federal Bureau of Prisons have also banned or restricted this practice, which the American College of Obstetricians and Gynecologists opposes because it puts “the health of the woman and fetus at risk.”

Children with an Incarcerated Parent
